Practical 11: Compare AI vs Human Writing

Aim

To compare AI-generated content with student-created content.

Objectives
- To identify difference in writing
- To understand AI limitations

Materials Required
- AI tool

Procedure1. Write paragraph manually – Compose a paragraph yourself using your own ideas, wording, and structure on the selected topic.

2. Generate same topic using AI – Use an AI tool to produce another paragraph on the same topic for comparison.

3. Create comparison table – Organize both paragraphs side-by-side in a table to compare style, clarity, tone, and content differences.

(a) Write a 100–150 word paragraph on the topic: "Will AI replace jobs or change them?" (This must **by the student.)**

In Today's world Ai plays a very important role in our day the to day life. From smartphones in our hands to advance technologies, Ai is integrated everywhere. The impact of Ai on jobs is a complex and multifaceted issue. Ai has the potential to replace certain jobs and change some jobs that require Human interaction, Human interaction and complex decision-making jobs are less likely to be affected by Ai.

jobs that require routine work or has repetitive task, data analysis and customer service are likely to be replaced by Ai, because Ai tools like chatbots and virtual assistants can handle customer inquiries and provide basic support ultimately, the impact of Ai on jobs will depend on how it is developed and deployed.

b) Ask any AI tool (ChatGPT / Gemini / Copilot) to write on the same topic: "Will AI replace jobs or change them?"

Artificial Intelligence is rapidly changing the way people work, and many experts believe that it will transform jobs rather than fully replace them. AI systems can perform tasks like data processing, pattern recognition, and automation much faster than humans. Because of this, jobs that involve repetitive or predictable tasks may disappear over time. However, AI will also create new opportunities in fields such as technology development, cybersecurity, robotics, and data science. Human skills like creativity, empathy, problem-solving, and teamwork will still be very important. In the future, most jobs will likely involve humans and AI working together. Overall, AI is more likely to change the nature of work, making jobs smarter and more efficient instead of removing them completely.

c) In your practical copy, create a Comparison Table with the headings:
I. Human-Generated Content
II. AI-Generated Content

Aspect	Human-Generated Content	AI-Generated Content
Main Idea	Explains that AI may replace some jobs but will not take over all jobs	Emphasizes that AI will mainly transform jobs and create new opportunities
Examples Used	Chatbots, virtual assistants, customer service, routine work	Data entry, upskilling, new job roles like AI developers
Focus Area	Present impact of AI on employment	Present and future impact of AI on the workforce
Writing Style	Simple, descriptive, and explanatory	Clear, structured, and slightly analytical
Depth of Analysis	Basic explanation with practical examples	Broader perspective with emphasis on adaptation
Conclusion	AI's impact depends on how it is developed and deployed	Clear, structured, and slightly analytical
